

GTB Technologies Data Loss Prevention Suite

"Putting the 'P' back into DLP"™

Accuracy

Ports

Protocols

Support

Data breaches hurt the bottom Line

INNOVATION = TRUST

GTB Technologies has re-invented the enterprise data loss prevention marketplace, bringing a broad set of influential innovations to a market that has largely been misunderstood by other vendors, and at times analysts

Easy to Implement

Simple to Use

Inexpensive

Our products provide unprecedented, real-time visibility and control of content – without performance degradation

- Accuracy
- All Protocols / Ports
- Scalability
- Security
- Language support
- Lowest cost of ownership

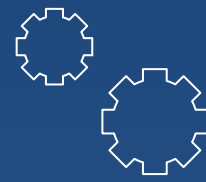

"Putting the 'P'
back into DLP"™

Security Solution

Companies are struggling to identify and protect sensitive information. Confidential customer data, intellectual properties, trade secrets and legal documents are being shared against authorization, costing organizations millions in restitution. Because this sensitive information is so easily accessible, in today's open environments, the need for data security has amplified.

Latest Security Concerns - WikiLeaks

Recently, the severity of data protection and insider threats has significantly increased. Information that is being stored on the network and various removable media devices is getting into the hands of outsiders, thus, violating state and federal enforced laws and regulations designed to protect such data: Sarbanes Oxley, GLBA, HIPAA, CA SB1386, CA AB1950, Payment Card Industry (PCI) Data Security Standard, The Patriot Act, and others

The Inspector, a "Reverse Content-Aware Firewall"™

monitors, blocks, encrypts, redacts (masks) and alerts on all outbound violations of secure content

- Protects text and binary data, structured or unstructured data in all file formats and all protocols, even SSL
- 100% detection rate with negligible amount of false positives

GTB TECHNOLOGIES PROVIDES

COMPLETE "CONTENT AWARE" DLP

WHY CHOOSE GTB?

The GTB DLP solution is unique from leading competitors in that it addresses insider threats directly from trusted or un-trusted users.

With state-of-the-art fingerprinting engines, GTB's content-aware Reverse Firewall, is capable of **inspecting all protocols (even those that may be unknown)** and stopping a loss, as opposed to just reporting it.

SOME GTB DLP DIFFERENTIATORS:

- Secures IP / Rich Media Content - Pre-release films, movie & audio files, pictures, source code
- Data format agnostic
- Covers all Ports on all TCP channels including SSL
- 100% detection rate – no false negatives
- Able to block based on severity without a proxy server
- Multi-field policies for structured database protection

Endpoint Protector

blocks, encrypts, alerts and audits removable media

- Provides complete access control addressing all removable media
- Detailed file auditing
- Online and off-line policies

eDiscovery

discovers confidential data anywhere on the enterprise network and performs data classification for secure content

"The GTB solution was registering events from exact matches on our customer database before we left for dinner on the first day. We were able to turn on blocking of customer data sent via IM and HTTP immediately," [Tom McGirr](#),

[Manager of Network Operations, B-Line LLC](#),

"**100% catch rate for data leakage? You bet!** If you have sensitive information on your enterprise, you need this device... This is a first rate product with some real innovations." [Peter Stephenson](#),

[Editor, SC Magazine](#)

"The Inspector stands out in its blazing speed when detecting fingerprinted data. We have never seen a solution respond so quickly to a potential data breach when using fingerprinted data. Also you can **cut and paste a small fragment of fingerprinted data into another form and the Inspector still finds it accurately.**"

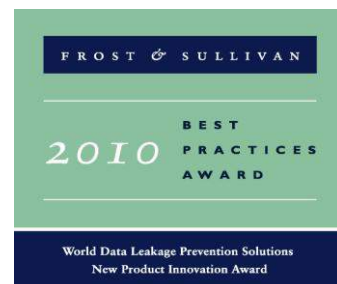

[Tom Bowers](#),
